

Authorization --StuccoSpec / Safe Aire Authorization for Moisture Testing

StuccoSpec / Safe Aire Technology specializes in moisture and environmental testing of buildings and homes. We are a waterproofing and mold consulting company. **We do not perform home inspections.**

In order to perform this assessment, we need your permission to conduct this test. It is not necessary for you to be home at the time of the test, and the consultant does not need access to the inside of the building or home unless it is a 3 or 4 story and a roof top terrace is present.

StuccoSpec / Safe Aire uses standard industry practices for conducting the moisture tests, which includes the use of a penetrating probe meter to verify the moisture content of the structural wood of the home. Small (up to 1/8") holes will be drilled in some locations of the home in order to conduct the test. These holes will be sealed with an appropriate sealant after the test is conducted.

I give my permission to test my home or building located at:

---

Street address of home

---

Name of owner (please print)

Phone #
